# Coronavirus COVID-19 words and terms explained in plain English

The National Adult Literacy Agency (NALA) has compiled the following words about coronavirus (also called COVID-19) with plain English explanations. We hear many of these words everyday on the news, radio, TV and online. We list words from A-Z.

The words and definitions are taken and adapted from:

- the <u>Health Service Executive</u> (HSE),
- World Health Organisation (WHO),
- newspapers, TV and radio such as RTÉ news, glossary of terms in Time magazine,
- Health Protection and Surveillance Centre (HPSC) A to Z list, and
- dictionaries Merriam-Webster have added new words to their dictionary.

## Α

Asymptomatic	This is where you are not showing any symptoms that you have COVID-19. However, you can still pass the virus on to others.
At-risk groups	There are some groups of people who may be more at-risk of serious illness if they catch COVID-19. You are more at risk of serious illness if you catch COVID-19 and you:
	<ul> <li>are 60 years of age and over - people over 75 are particularly vulnerable,</li> <li>have a long-term medical condition - for example, heart disease, lung disease, diabetes, cancer or high blood pressure, and</li> <li>have a weak immune system (immunosuppressed)</li> </ul> Source: HSE webpage on <u>At-risk groups and coronavirus</u>

#### В

Body	The normal adult body temperature is 36.5 to 37 degrees Celsius. A high
temperature	temperature or fever is 38 degrees Celsius or above.

Case	This is a person with COVID-19.
Case	
	(An index case is the first documented case in a population, region, or
	family.)
Chain of	This is how an infection spreads from one person to another.
infection	This can also be called chain of transmission.
	You can read more on this in the HSE Patient Safety sheet on germs.
Clinical trials	These are types of research that study the effectiveness and safety of
	medications (such as vaccines) by monitoring their effects on large groups
	of people.
Close contact	This can mean someone:
	<ul> <li>spending more than 15 minutes face-to-face contact within 2 metres of</li> </ul>
	an infected person
	<ul> <li>living in the same house or sharing accommodation with an infected</li> </ul>
	person
	Source: HSE webpage on Symptoms and causes
Cluster	This refers to a small group of people in a particular space who all have the
	same disease. For example, a cluster of people in nursing homes or
	hospitals.
Cocooning	This is where certain groups of people (such as over 65s and people with
y	health issues) will stay in their homes to avoid contact with any person who
	may have COVID-19.
Community	This occurs where a person who gets COVID-19:
transmission	<ul> <li>has not travelled to an affected area, and</li> </ul>
	has no connection to a known case.
Communicable	This means that coronavirus can be spread from one person to another.

Co-morbidity	This means having two different health conditions at the same time. COVID-
	19 has been found to be particularly severe for people who have other
	health issues.
Compromised	This is where you have a weak immune system (immunosuppressed).
immune system	There are many things that can cause a weak immune system, including:
	cancer treatment
	<ul> <li>treatment for autoimmune diseases, such as rheumatoid arthritis,</li> </ul>
	lupus, multiple sclerosis (MS) and inflammatory bowel diseases
	• HIV
	<ul> <li>having an organ transplant or a bone-marrow transplant</li> </ul>
	Source: HSE webpage on <u>At-risk groups and coronavirus</u>
	Contact with someone with COVID-19 can include direct contact and indirect
and indirect	contact which can spread the virus.
	1. Direct contact is when you breathe in droplets from an infected person's
	cough or sneeze through the air. That's why keeping your distance to 2
	metres apart is important.
	2. Indirect contact is when you touch something that the infected person
	has touched with the virus and it is spread to you. That's why cleaning
	regularly touched surfaces like door handles, light switches and so on is
	important.
	important.
Contact tracing	When the health authorities try to find who has been in close contact with
_	someone who has COVID-19 to see who else may be at risk of catching it.
	Source: Journal.ie contact tracing explainer
Contagious	This means that a disease can be spread from one person to another,
	typically by direct contact. This is why we don't shake hands with people
	during this COVID-19 outbreak.
Contamination	This is a process of infecting or staining something making it impure or
	spoiled.

Containment phase	Steps introduced to prevent the virus from spreading for as long as possible, such as identifying early cases and trying to establish who the infected
	person has been in contact with. Source: RTÉ website: the terminology of COVID-19
Containment	Process of preventing transmission of COVID-19 from an infected individual
strategy	to others. This means isolating a person with COVID-19 from other people.
Coronavirus	Coronavirus disease (COVID-19) is an infectious disease caused by a newly
COVID-19	discovered coronavirus. <b>Source:</b> World Health Organisation <u>https://who.int</u>
The name COVID- 19 comes from the year it was first detected (2019) and using letters from CO-rona-VI- rus D-isease.	It is new illness that can affect your lungs and airways. Most people infected with the COVID-19 virus will experience mild to moderate respiratory (breathing) illness and recover without needing special treatment. COVID-19 is spread by sneeze or cough droplets. To infect you, it has to get from an infected person's nose or mouth into your eyes, nose or mouth. This can be direct (from droplets) or indirect (on hands, objects, surfaces).
	Source: <u>HSE</u>

Delay phase	In this phase the government has taken measures to reduce the peak impact
	of the COVID-19 and to slow its spread.
	For example, shutting schools and colleges and placing restrictions on public
	gatherings are measures to reduce the impact on COVID-19.
	Source: RTÉ website: the terminology of COVID-19
Diagnostics	The way healthcare staff identify a particular illness by examining signs and
	symptoms.
Disease	An illness that affects a person, animal, or plant. It can prevent the body and
	mind from working normally.
Disinfectant	This is a chemical liquid that kills bacteria. A common disinfectant is bleach.
J	1

# Ε

Endemic	The constant presence of a disease in a population within a certain area.
	Source: RTÉ website: the terminology of COVID-19
Epidemic	This is a sudden increase in the number of cases of a disease – more
	than what's typically expected for the population in that area.
Epidemiology	The study of the spread or pattern of sickness in a group of people.
Exponential	This means that numbers increase over time very rapidly as they multiply
growth	every day. For example:
	• 2 people infect 2 more people each meaning 4 people are infected.
	4 people infect 4 more people each meaning 16 people are
	infected.
	16 people infect 16 more people each meaning 356 people are
	infected and so on.

G	
Gov.ie website	This is a central website for government services and information.

## Н

Hand hygiene	Hand hygiene is a way of cleaning your hands that reduces harmful bacteria on
and	them and stops the spread of harmful germs.
handwashing	The HSE and the Government have recommended that we wash our hands regularly using soap and water. Sing the 'Happy Birthday' song twice while washing your hands – this takes 20 seconds. Watch a video <u>here</u> . More from the HSE on <u>how to clean your hands</u> and a hand hygiene <u>poster</u> .
Health	Strong health literacy is important as we are dealing with a lot of health
literacy	information during this COVID-19 outbreak.
	It has two elements:
	1. Health services and health care professionals communicate clearly and
	take account of possible health literacy and numeracy needs.
	2. People understand health information correctly and can make an
	informed decision
	Source: NALA Factsheet on health literacy and numeracy
Herd	This is when a high percentage of the community is immune to a disease,
immunity	usually through vaccination and/or prior illness.
HSE	The Health Service Executive (HSE) provides all of Ireland's public health
	services in hospitals and communities across the country.
	They are leading the information campaign about COVID-19 and are the best source for information about Ireland.

Immunisation	This is process where a person is made immune or resistant to an infectious
	disease, usually by giving them a vaccine.
Incubation	The time between when you are exposed to the virus and when symptoms
period	and signs become obvious.
Infection	This occurs when germs enter the body, causing it to display symptoms as it
	tries to destroy the harmful germs.
	Source: HSE Patient Safety sheet on germs.
Infodemic	This is when there is too much information – some accurate and some not.
	An infodemic can make it hard for people to find trustworthy sources and
	reliable guidance when they need it.
	Source: WHO Situation Report 13, February 2020
Isolation	The process of separating something from other things.
	Self-isolation means staying indoors and completely avoiding contact with
	other people. You need to do this if you have symptoms of COVID-19. This
	is to stop other people from getting it. More information from the <u>HSE</u> .
L	1

- K none

L

Lockdown	A state of isolation or restricted access put in place by the State to keep
	people safe against the spread of COVID-19.

Mask	A covering to fit over the nose and mouth to protect against infection from
	others. The World Health Organisation say that if you are healthy you only
	need to wear a mask if you are taking care of a person with suspected
	COVID-19 infection.
	More information: WHO Advice for public: when and how to wear masks
Misinformation	This is false or inaccurate information that deliberately intends to deceive.
	For example, in mid-March there were messages on WhatsApp that Ireland
	was going into lockdown. This was false and Thejournal.ie debunked it
	here.
Mitigation	
Mitigation	This phase:
phase	1. provides hospitals with the support they need to maintain essential
	services as COVID-19 spreads, and
	2. helps those who are ill in the community to reduce the overall impact
	of COVID-19 on their families, friends and communities.
	Source: RTÉ website: the terminology of COVID-19
Morbidity rate	This is the percentage of people who have a disease in the population.
Mortality rate	This is the percentage of people who have died because of an illness in the
	population.

### N – none

0

Outbreak	The number of disease cases that is higher than what is normally expected.
	In 2020, we are currently experiencing a sudden outbreak of COVID-19 with
	531,609 cases since December (As of 26 March, Source: Worldometer
	www.worldometers.info/coronavirus/#countries)

### Ρ

Pandemic	This is when an epidemic spreads between countries affecting a large number of people. In 2020, we are in a pandemic with the worldwide spread of COVID-19.
Personal	This is equipment that will protect the user against health or safety risks at
Protective	work. It includes for example masks, gloves, gowns and eye protection.
Equipment (PPE)	
Physical	This means people are separated out. For example, when we go outside
distancing	we must make sure we are 2 metres (6.5 feet or 3 arm length for an
	average sized adult) away from the next person.
Pre-existing	This means any condition for which the patient has already received
condition	medical advice or treatment. For example, diabetes, cancer, lung disease
	and heart disease. It can also be called an underlying condition.

## Q

Quarantine	A period of time where a person or animal with a contagious disease is
and	isolated.
Self-	
quarantine	Self-quarantine is where you restrict your movements to avoid contact with
	other people within your home and in social situations for a period of time – it
	recommended 14 days.

-	-
	ς.

N	
Respiratory	This means breathing. Lungs help us to breathe.
Respiratory	These are measures to prevent infection such as:
hygiene	<ul> <li>Covering your nose or mouth with a tissue when coughing or sneezing and getting rid of the used tissue in a waste bin and wash your hands.</li> <li>Coughing or sneezing into the inner elbow (upper sleeve) rather than into the hand, if no tissues are available.</li> <li>Keeping contaminated hands away from the mouth, eyes and nose.</li> </ul>
	<ul> <li>Washing your hands after:</li> <li>sneezing, coughing or blowing your nose</li> <li>having contact with possible contaminated objects or materials such as table tops, smartphone, remote controls.</li> </ul>
Restricted	This means avoiding contact with other people and social situations as much
movement	as possible. It is sometimes referred to as self-quarantine.
	Source: HSE webpage on Restricted movements and self-isolation
	The latest guidelines from the Government were published on Tuesday 24 March and are available here.

S	
Self-isolating	This means staying indoors and avoiding contact with other people. The HSE
	says anyone with symptoms should self-isolate for 14 days, as this will help
	slow the spread of coronavirus.
	More information on self-isolation from the HSE <u>here</u> .
Social	This means you stay away from other people so less people get the virus.
distancing	How do we do this?
	We do this by:
	<ul> <li>keeping a space of 2 metres (6.5 feet or 3 arm lengths for an average sized</li> </ul>
	adult) between you and other people
	reducing physical connection with people outside the workplace and home
	<ul> <li>reducing the number of people you meet every day</li> </ul>
	<ul> <li>avoiding common sleeping areas</li> </ul>
	<ul> <li>avoiding crowded spaces</li> </ul>
	working from home if possible
	Protect each other Stand apart 2 metres 2 metres
	Source: HSE website: Protect yourself and others and watch the video here.
Spread (stop	COVID-19 is spread through sneeze and or cough droplets.
the spread)	<ul> <li>You could get the virus if you:</li> <li>come into close contact with someone who has the virus and is coughing or sneezing</li> <li>touch surfaces that someone who has the virus has coughed or sneezed on and bring your unwashed hands to your face (eyes, nose or mouth)</li> </ul>
	Source: HSE website: Symptoms and Causes

Symptoms	These are signs that you might have COVID-19
of	
coronavirus	The main symptoms to look out for are:
(COVID-19)	<ul> <li>fever (high temperature – 38 degrees Celsius or above) or chills</li> </ul>
	<ul> <li>a cough – this can be any kind of cough, not just a dry cough</li> </ul>
	shortness of breath
	Source: HSE website: Symptoms and Causes
Super	This is a person who infects significantly more people than usual. This is not
spreader	a scientific term and has been used by the media.
-	
	You can read more about this term in this article in the Guardian.
Supply chain	This is a system of organisations, people, activities, information, and
	resources involved in moving a product or service from supplier to customer.
	In relation to COVID-19, a supply chain is about how food and other products
	get from a farm or factory into our supermarkets and shops.
Surge	A sudden increase in cases of people infected with COVID-19.
Swab	This is a small piece of cotton wool used by a doctor or nurse for taking a
	specimen (sample of something).
	If you need a test for COVID-19 a healthcare worker will take a sample from
	inside your mouth and nose using a swab.
	Here is a <u>video</u> of Ryan Tubridy getting a swab on the Late Late Show.
Symptomatic	This is a person who has COVID-19 and can spread it to other people. They
person	have COVID-19 symptoms – see HSE website: <u>Symptoms and Causes</u>

1	
Testing	This is where people with symptoms that could be COVID-19 are checked for
	the virus by taking a swab from their mouth and nose.
	Your GP (doctor) can arrange a test if you need one. Call your GP to be assessed for a test if you have a fever (high temperature – 38 degrees
	Celsius or above) or chills and <b>one</b> of the following symptoms:
	<ul> <li>a cough – this can be any kind of cough, not just a dry cough</li> <li>shortness of breath</li> </ul>
	Your GP (doctor) may also arrange a test if you are in one of the priority
	groups. Read more information on testing on the HSE website.
Transmission	The act of transferring something from one person or place to another.
	In the case of COVID-19, this means transferring the virus from one person
	to another by coming into close contact with someone who has the virus and
	is coughing and sneezing. You can also get the virus from touching surfaces
	that someone who has the virus has coughed or sneezed on.
Triage	This is the process of sorting people based on their need for immediate
	medical treatment and sometimes has to be used in hospitals.

## U

Underlying	This means any condition for which the patient has already received medical
condition	advice or treatment. For example, diabetes, cancer, lung disease and heart
	disease. It can also be called a pre-existing condition.
	People with underlying conditions are more at risk of serious illness if they catch COVID-19.

V

Vaccine	This is a product that helps the body's immune system to fight against
	infections. Most vaccines are given by an injection, but some are given orally
	(by mouth) or sprayed into the nose.
	There is currently no vaccine for COVID-19.
Vector/s	In medicine, a vector is a carrier of disease.
Ventilator	This is a machine to support breathing. It helps to get oxygen into the lungs,
	removes carbon dioxide from the body and helps people breathe easier. It
	can also breathe for people who cannot breathe on their own.
Virologist	A scientist or doctor who studies viruses and the diseases viruses cause.
Virus	It is a tiny, living thing that causes disease and sickness.
Vulnerable	A vulnerable person is someone in need of special care, support, or
person or	protection.
people	
	During the COVID-19 outbreak vulnerable people are older people, and those
	with underlying medical problems like cardiovascular disease, diabetes,
	chronic respiratory disease, and cancer.

#### W

WHO (World	The authority responsible for public health within the United Nations system
Health	(about 53 countries). It has excellent information resources including videos
Organisation)	about washing hands and how to social distance.
	The website is <u>https://www.who.int/</u>
WHO Alert on	The World Health Organisation launched WHO Health Alert on WhatsApp.
WhatsApp	
	This is a messaging service that will send you the latest reliable and trusted
	information and news on COVID-19. This includes symptom information and
	how to protect yourself. You can also ask questions.
	To join using WhatsApp, send the word 'Hi' to this number: 00 41 798 931
	892
Wuhan	This is the city in China where the first case of COVID-19 was discovered.
