

National Federation of Voluntary Service Providers Pension and Life Assurance Scheme

Investment Market and Funds Update – to 31 March 2025

Financial markets have remained volatile over the past 12 months, mainly caused by changing inflation expectations and concerns over a potential trade war. But resilient economic data and policy easing by major central banks led to gains in asset prices. These gains were focused mainly within equity markets and are reflected in positive performance for the funds in which your retirement savings are invested over the year to the end of March. Recent concerns and uncertainty around the impact of US tariffs and a potential global trade war have weighed on stock markets, with the economic and market outlook set to remain in a state of flux in the near term. This is likely to keep market volatility elevated.

Global equity markets rose by 8.0% (in euro terms) in the year to 31 March, despite headwinds that caused volatility to remain a market feature. These headwinds were mainly centred around concerns over inflation persistence, economic growth and most recently US tariff policies. However, economic data has been resilient and inflation levels have fallen over the past 12 months.

The favourable economic backdrop has supported equity markets over the past year, as has optimism for US growth following Donald Trump’s election victory and a Republican clean sweep in November. More recently, however, tariff policies from the Trump administration have led to concerns and uncertainty over the global growth outlook and this has weighed on global equities (-5.3% year-to-date in euro terms).

Over the past 12 months, inflation in major economies has come down significantly, and to levels not far from central-bank targets in some cases. This led investors to expect rate cuts, with both the European Central Bank and the US Federal Reserve starting to reduce their key rates in 2024. The focus for financial markets is likely to remain on tariff policies and whether a trade war ensues. This was exemplified recently when Trump announced far-reaching “reciprocal” tariffs on US trading partners, plans perceived as severe by investors. The backdrop means that markets are likely to remain volatile as investors wait to see how trade tensions play out.

We can see from the period below that staying invested delivered very strong returns for longer term investors despite the many temptations to sell. Equity markets will experience short term ups and downs, but it is time in the market, rather than timing the market, that is important for long-term returns. For most members, pensions savings are a long term investment and that is important to remember.

Long Term Investing

Source Bloomberg, April 2025, reflects the gross total return performance of the MSCI All Country World Index relative to a 1/1/1990 starting point.

Warning: Past performance is not a reliable guide to future performance.

We know that when it comes to investing, uncertainty is uncomfortable for most people. Equity market highs and lows can often prompt short-term emotional decision making and actions to buy or sell when perhaps the right thing to do is nothing. That is why we have specifically designed our investment solutions to make the journey smoother. There are two ways we do this.

Diversification

This means spreading investments, so the performance of your fund is not over exposed to any one company, asset class, sector, geography, currency, manager or strategy. The funds invest in a mix of equities, bonds, property and cash.

Risk Management

Growing retirement savings over time means investing in some higher growth but higher risk assets like equities. Our core competence is managing the risks associated with these assets in a variety of ways to reduce the peaks and troughs you might otherwise experience. These include specialist investment strategies like the Equity Option Strategy or science-based risk management like the Dynamic Share to Cash strategy.

So, whether you are choosing the lifestyle strategy where we do the thinking for you or you are choosing your own funds, take comfort that we can support you with solutions to help you stay invested and get the pension you deserve.

The below table shows the performances of all the funds available in the National Federation of Voluntary Service Providers Pension & Life Assurance Scheme, against their long-term benchmarks over shorter- and longer-term periods to the end of March 2025. It shows positive returns were recorded for the majority of funds over most periods.

Performance of funds in the Scheme to 31 March 2025	3 Months	Year to Date	1 Year	3 Years per annum (p.a.)	5 Years per annum (p.a.)	10 Years per annum (p.a.)
*EMPOWER High Growth Fund	-3.5%	-3.5%	5.6%	4.8%	9.2%	5.6%
Cash Deposit Rate + 4.5%	1.8%	1.8%	8.0%	7.1%	5.9%	5.0%
*EMPOWER Moderate Growth Fund	-1.9%	-1.9%	6.0%	4.6%	8.1%	5.0%

Personal Lifestyle Strategy

Most members of the National Federation of Voluntary Service Providers Pension & Life Assurance Scheme are invested in the Irish Life EMPOWER Personal Lifestyle Strategy (PLS).

PLS puts you in funds designed to achieve investment growth while at the same time balancing investment risk. From 20 years to retirement your pension fund will switch on a gradual basis into funds with lower risk and return expectations than from the early growth stage. From 6 years from your retirement date, PLS moves your pension fund into investments that best match how you are most likely to draw down your pension benefits on retirement. It does all the work for you. Please go to <http://www.fedvol.ie> (pensions tab) for the flyer on PLS.

Self-Select funds

However, you don't have to participate in PLS and can instead select a fund or mix of funds that suit you best from the six standalone funds available. We typically see people make selections based on how long they have to retirement or when they will need the money. When that period is 10 years or more, it may be more appropriate to consider funds with higher long term expected growth although these funds also carry higher short-term risks. It is prudent to consider moving to lower risk funds as you get closer to needing the money.

When self-selecting funds, it is particularly important to understand and consider your appetite for risk and tolerance for loss i.e., how much negative performance will you or can you endure. It is also crucial to be aware of the impact that volatile stock markets can have on your decision making. Market highs and lows can often prompt investors to act when it is ultimately detrimental to their long-term interests, whether over confidence when markets are strong or no confidence when they are weak.

Close relationship between annuity prices and annuity fund returns

As illustrated below, returns of the EMPOWER Annuity Objective Fund were negative over a 1-year period to 31 March 2025, reflecting the increase in bond yields and the decrease in bond fund values that occurred over this period. The fund returns tracked a decrease in annuity prices over the period, which are also linked to bond yields. This meant the purchasing power for members' funds who are most likely to purchase an annuity was broadly maintained. A close relationship between annuity price changes and annuity fund returns has been shown to exist over time as illustrated in the chart below, which shows how changes in annuity prices have closely matched the returns from the EMPOWER Annuity Objective Fund since the start of 2019. This is why the EMPOWER Annuity Objective Fund is used in the Irish Life EMPOWER PLS.

Benefits of Monthly Contributions

Buying when prices are lower makes sense. With monthly contributions you continue to buy units during periods of equity market weakness when unit prices fall which means you get more units for your contribution. The benefit is that your fund value will increase faster as equity markets recover.

Switching when equity markets are performing negatively

In times of uncertainty or equity market volatility, it can be tempting to switch some or all of your retirement savings to lower risk funds or even cash. While this is provided as a free option, it is worth remembering that even professional investors find it difficult, if not impossible, to consistently time when markets will rise or fall. More often, people are driven by sentiment and may exit funds when they have already fallen only to buy them back later at a higher price when stock markets have recovered. This simply erodes the value of your savings over time. Being invested and staying invested has been shown to be the most effective strategy over time.
