Considerations

What is the alternative?

Develop an understanding of What and Why.

For now, how far are you willing to go with a transformation of this nature?

There is value in setting parameters, both on what is to be achieved, and on which practices are & are not a consideration at this point.

Who do you need and want to partner you?

Are particular permissions needed, what type and to what extent do you want external support, experience, expertise?

Thank You
